

Datalogz is solving BI sprawl

What is BI sprawl?

An increasing amount of dashboards and reports in an enterprise's virtual workplace, which causes cloud cost spikes, ineffective decision-making, duplicated manpower, and compliance & security risks. BI sprawl is inevitable as enterprises reach data maturity.

BI sprawl leads to major problems:

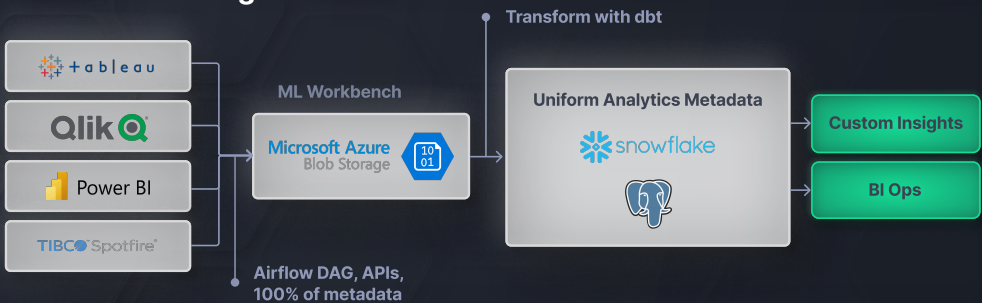

Inefficient data usage drives costs up

Duplicate reporting results in poor decisions

Overconsumption of resources slows the entire data system

Compliance risk is prominent in BI

How does Datalogz work?

Datalogz tackles 4 pillars of BI Issues

Free Resources

- Identify unused pro/premium accounts
- Detect duplicated datasets and reports
- Reduce datasets sizes

Improve Performance

- Detect user up/downtime
- BI workplace capacity management
- Refresh schedule optimization

Reduce Risks

- Identify unused/orphaned BI assets
- Alert sensitive data being downloaded/shared
- BI assets lifecycle management

Better Decisions

- Identify unendorsed/uncertified BI assets
- BI ownership assignment
- Prioritize action on BI Ops issues
