

The Control Tower for BI & Analytics

BI sprawl is killing your data strategy - here's the problem:

As enterprises become more data-mature, they invest heavily in building mature data infrastructures complete with governance, monitoring, and quality checks **at the data warehouse layer**. However, once data flows into the BI layer, where it's actually consumed and acted upon, those controls often vanish. **This is a critical oversight - the BI layer is the largest access point into enterprise data and the foundation for operational and strategic decisions.** Yet it's typically unmanaged—leading to redundant dashboards, conflicting reports, and a lack of trust in data. Datalogz addresses this blind spot, bringing governance, observability, and efficiency to the BI layer so executives can make decisions with clarity, confidence, and speed.

Millions Wasted:

Massive spend on BI tooling, compute and duplicate efforts with zero clarity on what is actually being leveraged.

High-Stakes Decisions, Bad Reports:

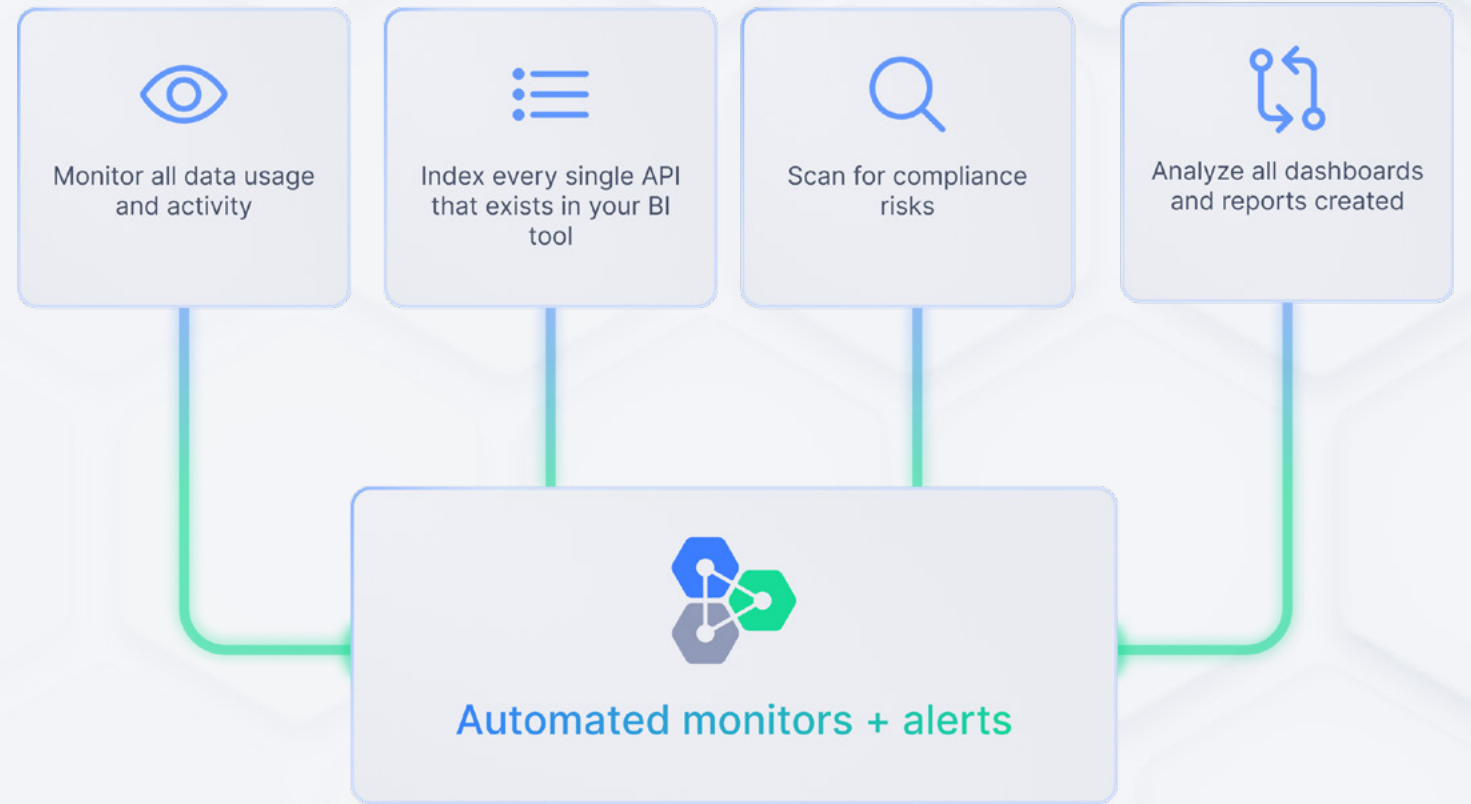

Leaders making mission-critical calls based on conflicting or low-trust reports risk costly missteps.

Skyrocketing Risk Exposure:

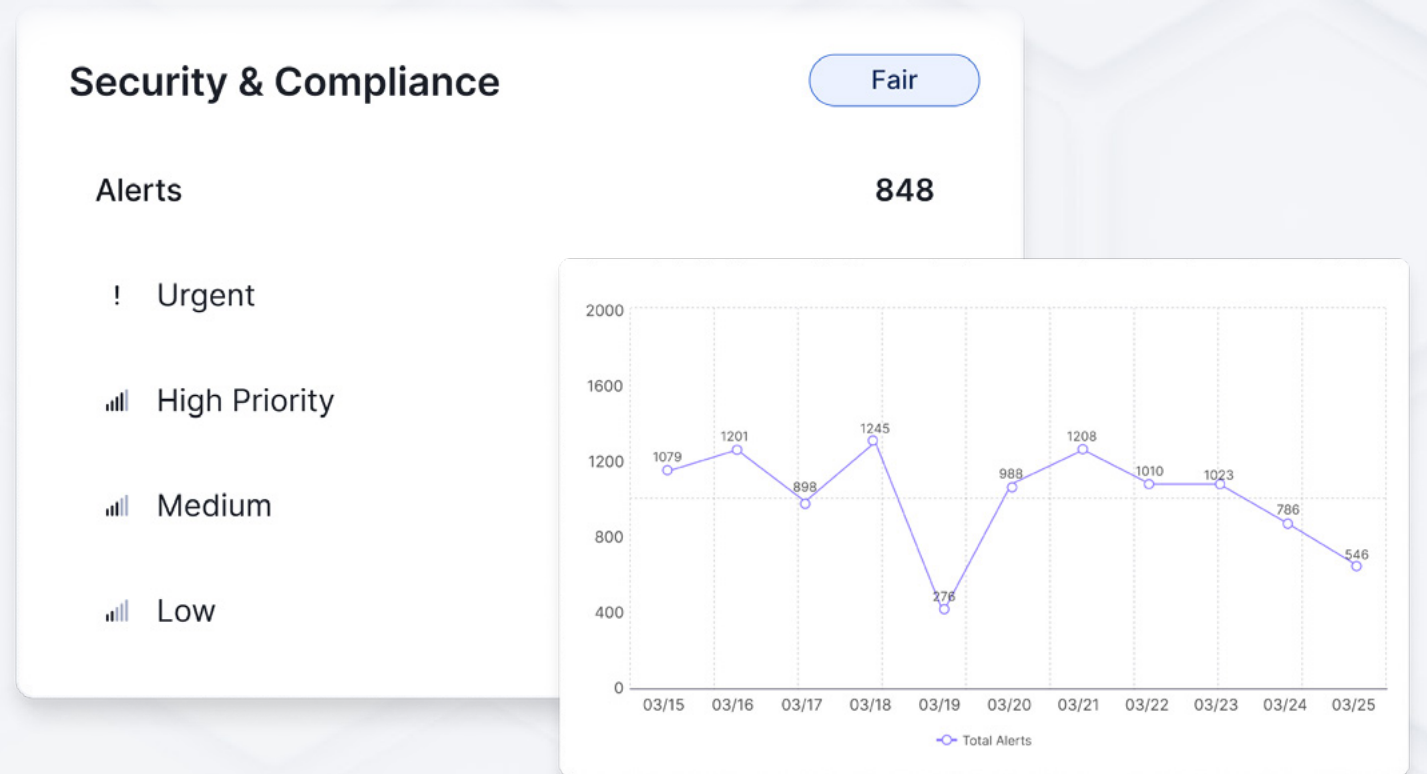

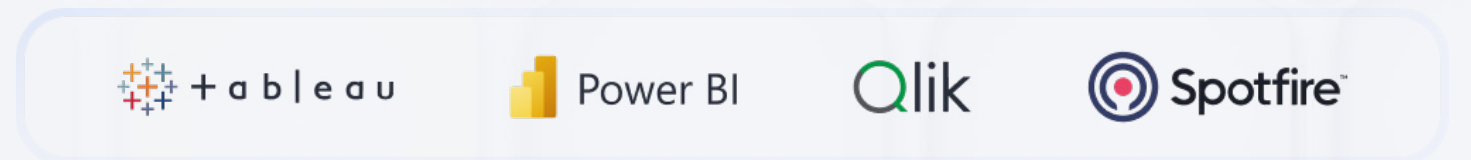

Security vulnerabilities and compliance gaps escalate, leaving the organization open to audits, fines, and breaches.

Meet the solution - Control Tower

Easily integrate with almost any business intelligence tool

Real-Time Visibility:

Gain a single, high-level view into your entire data ecosystem — finally understand what’s driving spend and performance.

Reduce Risk Exposure:

Strengthen compliance and security with proactive governance and automated alerts for policy violations.

Decision Confidence:

Ensure leadership has access to accurate, consistent, and trusted data across all reporting layers.

Operational Efficiency:

Free up teams from manual monitoring and cleanup — focus resources on strategic initiatives.

Cut Costs Fast:

Instantly identify and eliminate waste across reporting systems, compute usage, and duplicate data processes.

Scalable Control:

From rapid cost savings today to sustainable governance tomorrow, Datalogz grows with your business needs.

**On a mission
to End BI Spawl**
